

Those who are at low risk of aggravation of the new coronavirus

(Those who are other than elderly people, people with underlying diseases, pregnant women, etc.) and Children who can not do Self-check (self-examination) and their parents

If the new coronavirus infection and seasonal influenza are prevalent simultaneously, there is a possibility that fever outpatient departments will be tight.

If new corona virus and seasonal influenza spread simultaneously, it will be difficult to make reservations at fever outpatient department.
In order to protect those who are at high risk of aggravation, please use the self-check with the new corona antigen qualitative test kit.

If you have phenomenon like sore throat or fever...

Please test by yourself with the coronavirus qualitative test kit approved by government.
