

From March 13, 2023 You can take off your mask!

From usual

Hand washing is even better!

Let's do
hand washing and finger disinfection
thoroughly.

* Hand washing and finger disinfection are fundamental to infection control.

Scene of
wearing a mask

It's better to wear a scene like this!

When oneself **has symptoms**
(Fever, cough, etc.)

When visiting a **medical institution and the elderly person's facilities**

It is important not to "pass it on to the people around you."

People who don't wear masks and people who do

Let's respect each other.

* As basic infection control measures, continue to "avoid crowds", "social distancing", and "ventilate".

* In case of spread of infection, it is recommended to wear masks according to the situation.
